Application/Control Number: 09/806,007

Art Unit: 2878

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-7, drawn to a photomultiplier tube circuit including a plurality of dynodes and a charging circuitry for providing charge to the dynodes, classified in class 250, subclass 207.
- II. Claims 8 and 9, drawn to a method of controlling the charging of a photomultiplier tube with a plurality of dynodes using a charging means having a specific charging cycle, classified in class 250, subclass 214R.

The inventions are independent or distinct, each from the other because:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the (charging circuitry) product of the photomultiplier tube as claimed can be used with/without any charging cycle other than the specific cycle of the claimed method, while the process/method as claimed can be practiced with another materially different product without the need of an oscillator as claimed in the claimed product, invention I.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their

Application/Control Number: 09/806,007

Art Unit: 2878

recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Que T. Le whose telephone number is (571) 272-2438.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Epps Georgia, can be reached on (571) 272-2328. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
